Precision Comes from the Core

Ensures High-Precision Measurements and Long-term Stable Operation.

Equipped with a mainstream DSP control chip for powerful computing performance, a 24-bit high-precision ADC for measurement accuracy, power and components with ample margin to ensure reliable, stable operation over time.

List Waveform Editing Output

Built-in 10 timed waveforms, expandable to 100 with PC software.

Equipped with LIST waveform editing, allowing users to customize output waveforms for sequential output in CV or CC mode to meet specific test needs.

4 Groups of Memory Quick Parameter Recall

The system has 4 preset memory groups for quick one-click recall of outputs, greatly improving operational efficiency.

Real-time Voltage/Current Curve Display

Online data recording for 1 minute, helping users detect abnormal fluctuations in real time.

Multiple Protection for Enhanced Stability

Full digital control with comprehensive protection

Built-in Discharge Circuit

When the power is turned off or the load is disconnected, the discharge resistor actively dissipates residual charge in the filter capacitor to prevent safety hazards.

CV/CC mode switching

The power supply automatically switches to CC mode to protect the circuit when actual current exceeds the preset value.

PC Host Control

Support PC host computer programming output, flexibly respond to diverse testing needs.

Industrial-grade Interconnection & Control

Easily integrates with industrial automation and networking systems.

Supports USB Device, DB9:RS485/RS232 (optional), and LAN (optional) interfaces, compatible with Modbus and SCPI protocols. Easily integrates into automation systems for remote control and multi-device network management.

WARNING

- To avoid electric shock the power cord protective grounding conductor must be connected to ground.
- Do not remove covers. Refer servicing to qualified personnel.

Voltage	Fuse
100-240V AC	250V, F10A

Device

RS485/RS232

LAN

Note: The interfaces are selectable (RS485/RS232 shared port).

Stable Power-On, Ensuring Reliability

With excellent dynamic response and output stability, there is no voltage or current overshoot during power-on, effectively protecting sensitive components and improving system safety and reliability.

Rigorous Factory Testing, Consistent Quality

Million Calibration Test Equipment

Safe to use, worry free quality!
